Planned Maintenance on wind turbines with jack-up vessel-‘WIND’

Maintenance is planned to commence within the boundaries of the Teesside Offshore Wind Farm with the assistance of the ‘Wind’ jack-up vessel. We acknowledge that the previous planned work has been delayed due to unsuitable weather and sea conditions over the last few weeks. The works will involve exchange of up to six existing gearbox at turbines 8A,09A,15B,17B,24C,27C. Anticipated duration of work for each turbine will take 6 to 8 days depending on the turbine status and weather conditions. **We plan for the works to commence on or around the 7th January depending on weather conditions.**

For safety reasons there will be a 500m exclusion zone around the radius of turbines and vessel shown below:

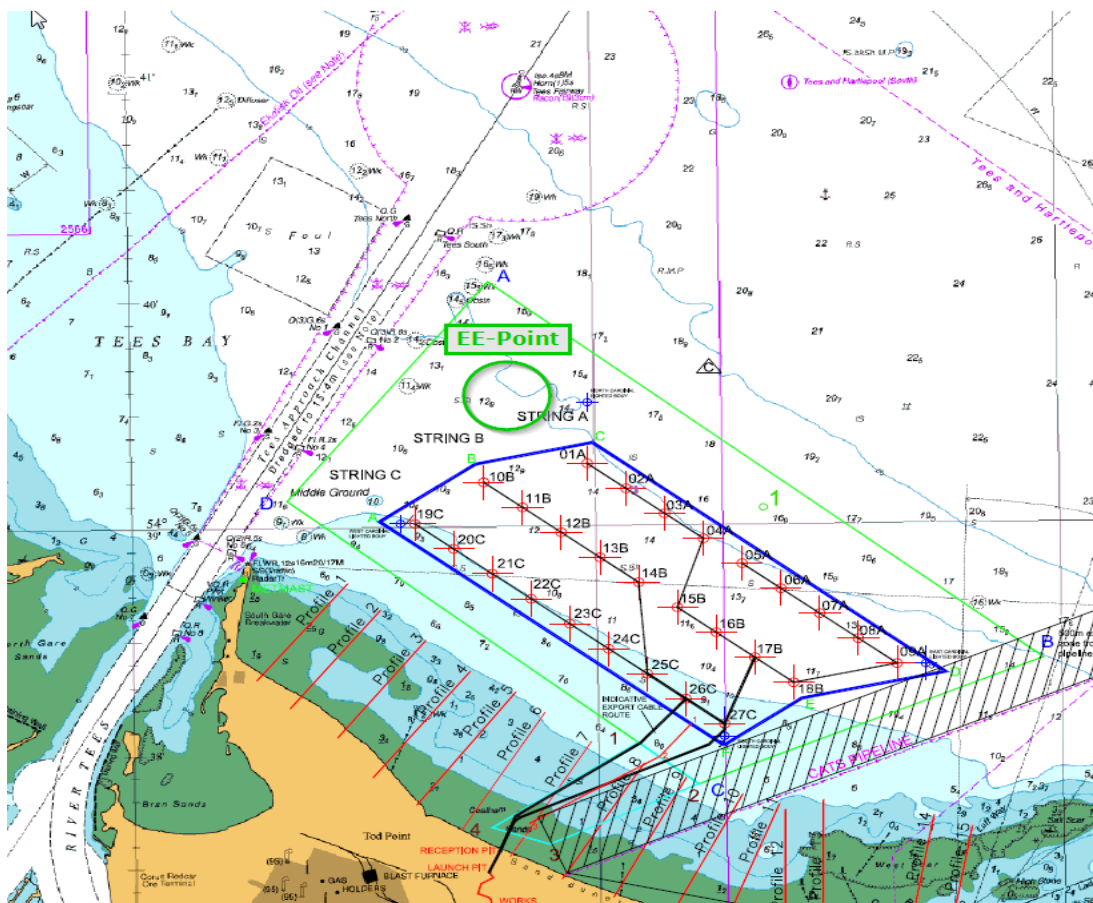

Notice to Marine Users 2024 Teesside Offshore Wind Farm

4th January 2024

The vessel will make use of the designated entry/egress point as shown, marked with the green circle. As the project progresses this plan might change, and marine users will be updated accordingly.

The adverse weather and standby position are the same as the entry/egress point. This is a floating standby position to be used if criteria are not met for positioning or jacking.
